CDI Overview

 CDI replaces the Primo Central Index (PCI) and the Summon Index

- CDI has billions of content objects with interconnected metadata
- More content in CDI than in either PCI or the Summon Index

What is changing and what is our goal?

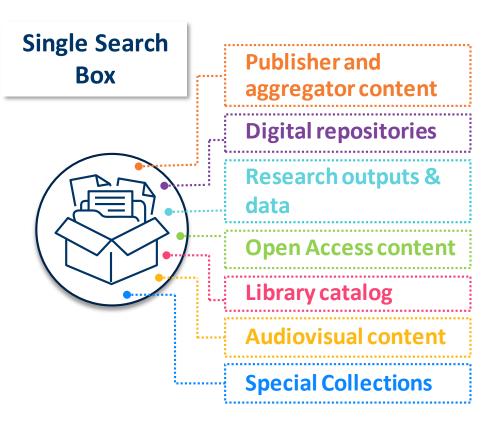

Steep increase of available material

- More material
- More diverse material types

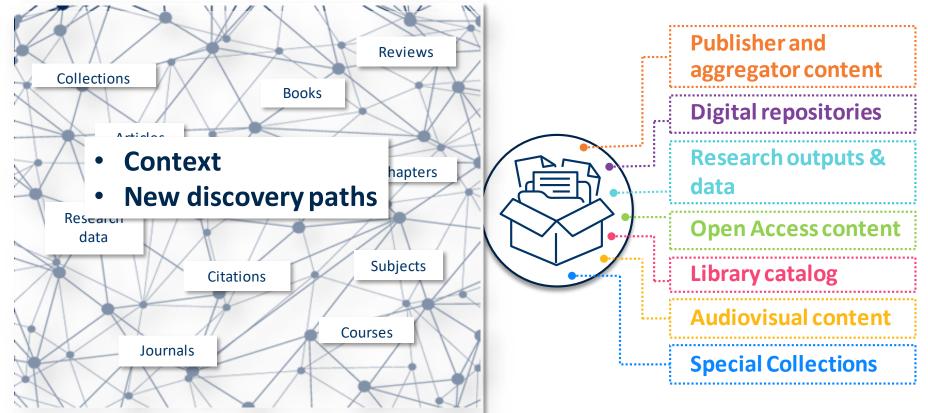

User expectations change

- Increased influence of social media and consumer platforms on user perception
- Expectation from faculty for users to use more diverse material

What is changing and what is our goal?

The move to CDI for Primo – key changes for library patrons

- Merged instead of grouped records
- More granular resource types
- Some changes in search and ranking behaviour due to new technology
- Searchable ORCID IDs

A note about permalinks:

Most but not all permalinks will be preserved – ca. 92%

Merged record instead of record groups

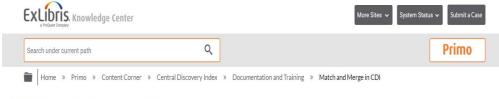

- The same item is indexed from several content providers
- In order to not show duplicates to the user
 - The records are grouped in Primo Central with one representative record on the result list
 - The records are merged in Summon only one enriched record is displayed

Merged records – more information

CDI will be using the same merge mechanism as Summon

Webinar recording: *The Match & Merge Story: Improving Search Results, Reducing User Confusion* (<u>video</u>, <u>.pdf</u>)

Match and Merge in CDI

The new combined record is called the logical record, the original records that contribute to the logical record are the physical records.

The move to CDI for Primo – key changes for librarians

- Move to single activation via Alma
- Optional EasyActive setting available
- Faster update cycles (up to 48 hours)

CDI Rollout Plan and Schedule

- CDI Enablement began for Alma-Primo customers in February 2020
- The Enablement Process:
 - Ex Libris transfers your current activations to CDI
 - You continue to work in PCI while testing your activations in CDI
 - When ready, you can check a flag in PCI to switch to CDI production
- CDI Enablement in May, exact date TBD, CDI Switchover no later than October

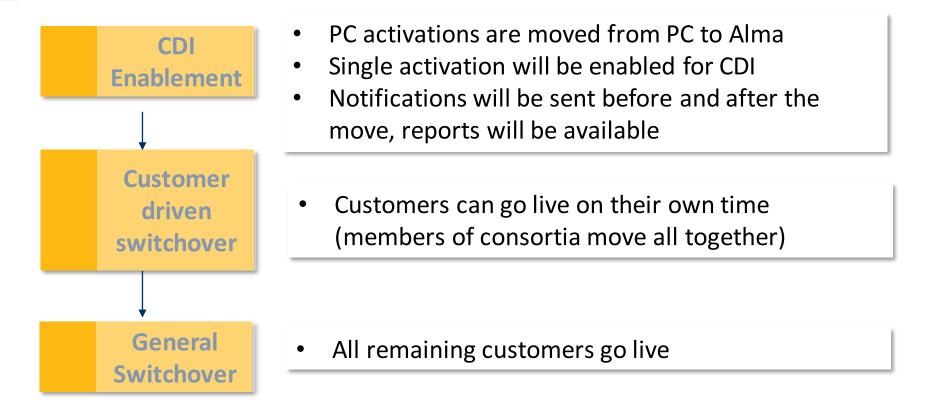

CDI Enablement and Switchover Process

- CDI Enablement and Switchover work is done by an Ex Libris team
- We recommend that you take time to check activations and become familiar with the activation options
- Any activations you make in PCI after the initial enablement should also be done in CDI
 - Transfer by Ex Libris is a one-time process

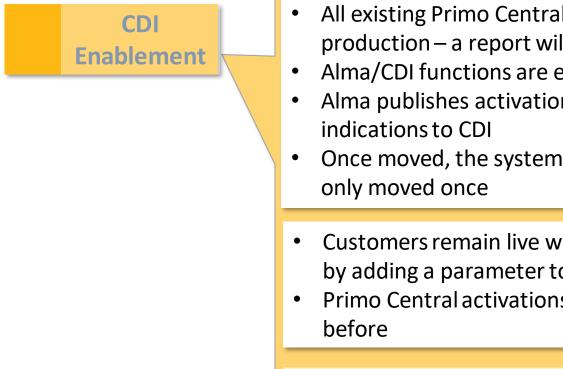

CDI Enablement Process

The general customer upgrade process for Primo in detail

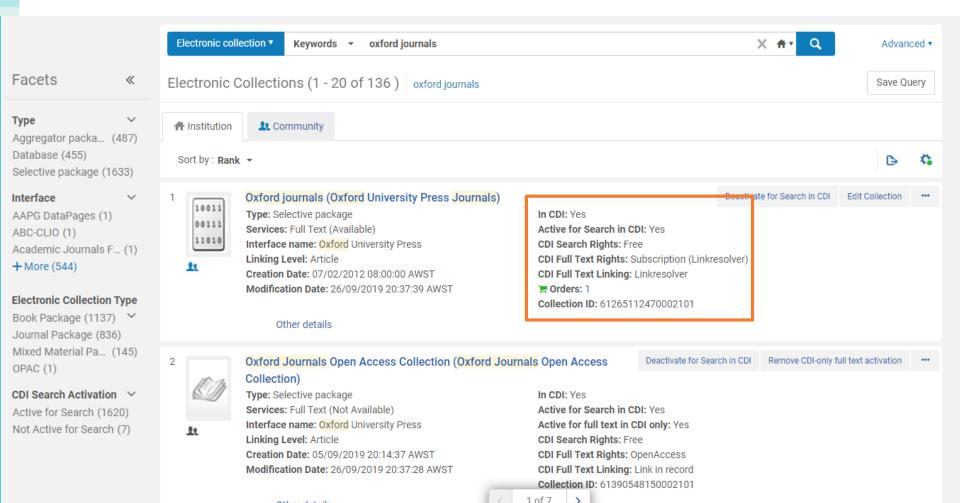

- All existing Primo Central activations are activated in Alma production – a report will be available on Alma
- Alma/CDI functions are enabled on Alma
- Alma publishes activations and full text availability
- Once moved, the systems work separately, activations are
- Customers remain live with Primo Central but can see CDL by adding a parameter to the production URL
- Primo Central activations continue to be managed as

No effect on library patrons

Single activation – what does that mean?

© 2020 Ex Libris | Confidential & Proprietary

Single activation – what does that mean?

CDI single activation from Alma: Settings and defaults

Default: All collections that are set to full text available will automatically be searchable in CDI regardless if they are active for search or not – customers can suppress them from search

- Two activation settings are available on Alma
 - Fully flexible setting (as today)
 - EasyActive setting (more automation, very similar to how Summon works today)
- Consortia activations work in the same way as all other Alma activations:
 - One institution with **multi campus setup**
 - Collaborative network with network zone and institutions

CDI Fully Flexible setting

Full text settings are under full control of the library

Ability to activate for search and for delivery separately

- Ability to activate for search where no full text available
- Collections will be available to users only after activation
- 48 hours between collections activation to search availability

- All customers who move from Primo Central to CDI will be moved with the fully flexible setting
- A later switch to EasyActive is possible

CDI EasyActive setting

Full text settings are under full control of the library

Everything (with exceptions) will automatically be searchable

- No activation for search
- Collections will be available to users immediately after ingest
- No delay with activating collections for search
- No broken link between acquiring content and making it available to patrons

Exceptions apply

- Subscribed A&I databases
- Collections with specialized content that are only relevant for specific regions or institutions
- Reference collections

Benefits of the CDI EasyActive setting (for Primo)

Less work, less coordination, less "forgotten" activations

- No separate activation for search collections become immediately available to patrons
- No calculation of alternative coverage if full text is available, it is searchable

Librarians can focus on full text, search is handled automatically

A proven concept

- Very close the way Summon activations are handled, it is a proven concept
- Recommended for all libraries filtering their default search by availability (items not available in full text will only appear if the user clicks on "expand beyond the library collection")

Summary and Resources

Training and Documentation

- Key CDI Video Training
 - CDI Overview for Existing Customers (6 minutes)
 - CDI Rollout Plan (4 minutes)
 - Single Activation for Existing Customers (15 minutes)
- Documentation
 - <u>CDI Frequently Asked Questions for Primo Customers</u>
 - How Are Collection Activations Moved from Primo Central to CDI for <u>Consortia and Multi-Campus Institutions?</u>

Summary

- The Central Discovery Index (CDI) will allow for improved discovery of the resources you already maintain
- CDI will improve and streamline the activation process
- The switchover from PCI to CDI will be primarily be done by Ex Libris
 - An enablement period will allow you and your staff to test activation and processes before switch to production
- Two activation options will give you flexibility in e-resource management

Thank you!
