Download Client Overview

When a student submits a CCCApply (Standard or International) or BOG Fee Waiver application, their application responses are stored in the CCC Tech Center's submitted application database in two tables: `submitted_application` and `submitted_question_response` (for supplemental question responses). The `submitted_application` table contains the applicants' responses on their application and a number of fields from their user account at the time they submit.

The Download client is a platform-neutral, command-line tool you use to download all students' application data for all three applications to a local computer, allowing you to import it into your college's SIS. After you unzip the Download client, you will use a text or XML editor to set up a properties file and then edit two sample XML files (job and format definitions) that allow you to:

- configure which student application data to retrieve
- define the data format for the download file

The CCC Tech Center provides sample job and format definitions XML files for each application (Standard, BOG Fee Waiver, and International) as a part of the Download client package.

After configuring your properties and job and format definitions XML files you can run download jobs in your test environment and SIS to confirm the data is mapping and storing correctly in your SIS prior to downloading data from the production server. Download jobs can be set for both the application data and supplemental question responses.

Working with XML

Although working with computer languages can be daunting, you don't need to be an expert to work with the Download client XML files, and you don't need any sophisticated tools. A simple text editor and a rudimentary understanding of XML hierarchy will be helpful.

If you are comfortable writing computer software, you can of course use the tools that best suit you. Otherwise, create your XML files using your operating system's built-in text editor. On Windows, the text editor is called Notepad, and on OS X, it is called TextEdit.

Note: These applications can work with file formats other than plain text. Be sure to save your files in plain text format.

Important: Do not use XML Notepad to edit your XML files. It adds a BOM (Byte Order Mark) to the file and will cause the download job to abnormally terminate and an error message may display indicating that the XML file contains a BOM.

If you run your download and get the BOM error, you can take one of the following actions to remove it:

- Copy and paste your XML content into a plain text editor or some other suitable tool to remove the extra characters (the BOM), such as Notepad. You can save the file as ANSI to remove the BOM.
- Switch to an XML editor that allows you to save the content and remove the BOM, such as one of the following:

- XML Copy Editor

To remove the BOM, click on options from the *Tools* menu and *de-select* "Save UTF byte order mark". Save your file.

- Notepad ++

To remove the BOM, select "Encode in UTF-8 without BOM" from the *Encoding* menu. Save your file.

Unzipping, Installing, and Configuring the Download Client

The following steps outline a "quick-start" process for a first-time unzip and configuration of the Download client.

- Detailed information about the underlying database information, as well as detailed XML and schema information, follows this quick-start section. Links to more detailed information are provided and noted where necessary.
- If you have already installed and used the Download client, then you may want to skip some of these steps and/or go directly to the detailed information provided in the job and format file configuration and data field sections.

When your college first transitions to the CCCApply applications, you will be working with a CCC Tech Center Project Manager. The Project Manager will provide you a check list for your implementation. One of the implementation steps includes contacting CCC Tech Center Technical Support to get your Download client.

Note: The download client requires that you have the Java Runtime Environment (JRE) or Java Development Kit (JDK) version 1.6 or higher. The steps that follow assume the 'java' and 'jar' commands are available from your PATH environment. The installers for both the JRE and JDK should install the Java runtime so that the various command-line tools, including 'java' and 'jar' are available in the system PATH.

1. Contact CCC Tech Center Technical Support to get your Download client. The Technical Support representative will deliver the Download client zip file to you via Dropbox or some other means that they will indicate to you.
2. Once you receive the Download client zip file, download the file to your local computer and extract it into a local file directory of your choice.

Once you extract your Download client, it should look something like this, with the expanded files within the transfer-client root folder:

transfer-client	8 items
conf	5 items
application-context.xml	1.6 KiB
ccctransfer.properties	112 B
client.jks	2.9 KiB
gcccd.edu.jks	2.9 KiB
logback.xml	1.1 KiB
formats	4 items
datatel.xml	51.7 KiB
expressConfig.xml	21.9 KiB
sample-bog-format.xml	3.3 KiB
sample-format.xml	22.8 KiB
jobs	2 items
SampleBogJob1.xml	415 B
SampleJob1.xml	533 B
download.bat	453 B
download.sh	326 B
test.bat	288 B
test.sh	384 B
transfer-client.jar	3.9 MiB

It is assumed that the FTT_HOME environment variable indicates the fully-qualified path to this directory, e.g.

FTT_HOME=c:\downloads\transfer-client

Note: Refer to the following information for supported parameter key configuration in the `ccctransfer.properties` file prior to changing your keystore password in the next steps:

Key	Description	Required?	Default Value
<code>javax.net.ssl.keyStore</code>	Specifies the Java Keystore that contains the certificate to validate your college to the CCC Transfer Server	Yes	<code>FTT_HOME/conf/client.jks</code>
<code>javax.net.ssl.keyStorePassword</code>	Specifies the password for the keystore that <code>javax.net.ssl.keyStore</code> indicates.	Yes	<code>password</code>

3. Change your college keystore password using the steps in this section. When you first receive the Download Client from the CCCTech Center, a certificate is created for your college that controls which MIS code(s) you can access for downloads. The default password for this initial certificate is “password.” The CCCTech Center recommends that you change this password using the following steps.

Note: Though security is driven by the key and not from the password to load the keys, we still recommend you change your password to be unique. Perform these steps from the machine where the keystore is installed.

Note: You only need to change your keystore one time for it take effect for all applications (both CCCApply applications (Standard and International) and the BOG Fee Waiver application).

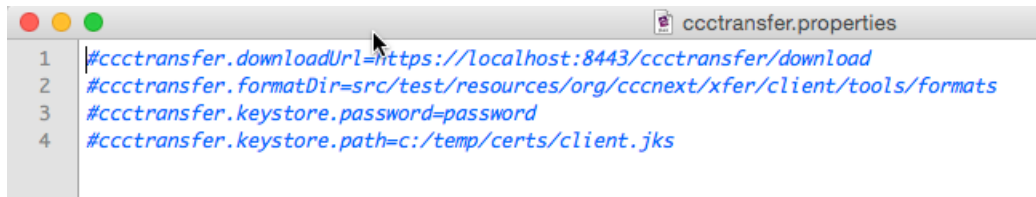

- a. Navigate to the `transfer-client\conf\` directory and create a backup of your current `client.jks` file.
- b. At a command prompt, navigate to the `transfer-client\conf` directory and locate your college key alias by entering the following command at a command prompt (press the Enter key after you type the command):

```
keytool -list -keystore client.jks
```

The output from running this command will be a list of keys contained in the keystore.
- c. Locate your college key alias by looking at the key name at the beginning of the entry of type "PrivateKeyEntry". The college key alias will usually be in the format of "xxx.edu" where xxx is your college's initials.
- d. Update your college keystore password by entering the following command at the command prompt from the `transfer-client\conf` directory (press the Enter key after you type the command):

```
keytool -storepasswd -keystore client.jks
```
- e. When prompted to enter your current keystore password, enter your current password (the password = password for all first-time Download Clients). You'll be prompted to enter your new keystore password, and then prompted to re-enter the new keystone password (press the Enter key after each entry).
- f. Update your college key password to match the keystore password you just set in step 3e above by entering the following command at the command prompt from the `transfer-client\conf` directory (press the Enter key after you type the command):

```
keytool -keypasswd -alias <key_alias> -keystore client.jks
```
- g. When prompted to enter your current keystore password, enter they keystore password you set in step 3e, above.
- h. Enter the same password as in step 3e when prompted to enter and re-enter your new key password.
- i. Open the `conf/ccctransfer.properties` file and edit the `ccctransfer.keystore.password` value to have your new password instead of the old one (password). That is, edit the word password after the = sign in this entry: `ccctransfer.keystore.password=password`

```

1 #ccctransfer.downloadUrl=https://localhost:8443/ccctransfer/download
2 #ccctransfer.formatDir=src/test/resources/org/ccnext/xfer/client/tools/formats
3 #ccctransfer.keystore.password=password
4 #ccctransfer.keystore.path=c:/temp/certs/client.jks

```

- j. Save and close the conf/ccctransfer.properties file. You have now updated your college keystore password for all applications (CCCApply Standard and International, and BOG Fee Waiver).
- k. Test the new keystore by entering the following command at the command prompt for each application.

To test the new keystore for your Pilot server, enter the following command at the command prompt:

- For the CCCApply application:
 - java -jar transfer-client.jar -test https://pilot.admin.openccc.net:8443/ccctransfer/debug
- For the BOG Fee Waiver application:
 - java -jar transfer-client.jar -test https://pilot.admin.openccc.net:8443/ccctransferbog/debug
- For the International application (coming soon):
 - java -jar transfer-client.jar -test https://pilot.admin.openccc.net:8443/ccctransferintl/debug

Confirm that no errors are printed.

To test the new keystone for your Production server, enter the following command at the command prompt:

- For the CCCApply application:
 - java -jar transfer-client.jar -test https://admin.openccc.net/ccctransfer/debug
- For the BOG Fee Waiver application:
 - java -jar transfer-client.jar -test https://admin.openccc.net:8443/ccctransferbog/debug
- For the International application (coming soon):
 - java -jar transfer-client.jar -test https://admin.openccc.net:8443/ccctransferintl/debug

Confirm that no errors are printed.

4. You will have sample job and format definition XML files included in your package. These files will usually include the application name in the file name (i.e. SampleBogJob1.xml in the image above is a sample job file for the BOG application).

 **Note:** It is also wise to check the CCC Tech Center Public Documentation pages for the latest updates to Download client files including the job and format definition XML files [here](#).

5. Using a text or XML editor, open the sample job XML file for the application for which you plan to download student application data.

 **Note:** If this is your initial download, then you will likely be preparing to download the CCCApply Standard application since it is required you go live on that application prior to the BOG or International applications.

```

1 <!--
2  replace url with server download url
3  replace my_mis_codes with a comma delimited list of your authorized mis codes
4  -->
5 <job url="https://pilot.admin.openccc.net:8443/ccctransfer" misCode="" xmlns="http://xmlns.cccnext.org/xfer
6
7     <!-- change the directory attribute with the directory name you want your download files to be saved -->
8     <file directory="downloads"
9         formatId="ccInst" prefix="mycollege" suffix=".txt" />
10
11     <file directory="downloads"
12         formatId="ccInst" prefix="mycollege-inst" suffix=".txt" />
13
14 </job>

```

6. Ensure that the job element's `misCode` attribute includes your college's three-digit MIS code. The job element's url attribute points to the Pilot database environment in the above image.
7. Update the file element's `directory` attribute by replacing the "downloads" in the above example to be the name of the directory on your local computer where you want the download file to be saved.
8. Update the `formatId` attribute by replacing the `ccInst` in the above example to be the same name of the `formatId` in the format definitions file.

 **Note:** See the screen shot above and below for an illustration of this step. When you run the Download Client job, all format XML files in the formats directory are "opened" and scanned for the id that matches the `formatId` in the job XML file. When the matching id is found, that determines which format is applied to the downloaded data.

9. Update the prefix and suffix attributes by replacing the "mycollege-inst" and ".txt" values with the file name prefix for your choice and the file-type extension of your choice (i.e. .csv, .txt, etc.).
10. Save the job file by using Save As, and rename the file to the name of your choice. It's best practice to include the application name in the file name. (e.g. StandardJob.xml for the CCCApply Standard application.)
11. Using a text or XML editor, open the format definitions XML file for the application for which you plan to download student application data.

 **Note:** In the example below, the `formatDefinition id` attribute is highlighted. This value must match exactly the `formatId` attribute in the associated job XML file (see the image, above). Your format file can include more than one `formatDefinition` defined within it as long as each has a unique id attribute value. Changing that corresponding id in the Download Client job file is what determines which format is used for any particular download job.

```

1 <?xml version="1.0" ?>
2 <formatDefinitions xmlns="http://xmlns.cccnext.org/xfer">
3   <formatDefinition outputFormat="fixed" id="ccInst">
4     <fieldList>
5       <field name="hs_name" len="57" />
6       <whitespace len="4" comment="SCHOOL TYPE" />
7       <whitespace len="10" comment="HS START DATE" />
8       <whitespace len="10" comment="HS END DATE" />
9       <whitespace len="10" comment="PERSON ID" />
10      <field name="lastname" len="30" />
11      <field name="confirmation" len="40" />
12      <field name="ssn" len="9" comment="#####">
13        <ssnFormatter />
14      </field>
15      <!-- To keep ssn dashes: <ssnFormatter removeDashes="true" /> -->
16      <field name="hs_cds" len="15" />
17      <field name="hs_edu_level" len="1" />
18      <field name="hs_comp_date" len="10">
19        <dateFormatter pattern="MM/dd/yyyy" />
20      </field>
21
22      <whitespace len="2" comment="RECORD BREAK" />
23
24      <field name="col1_name" len="57" />
25      <whitespace len="4" comment="SCHOOL TYPE" />
26      <field name="col1_start_date" len="10">
27        <dateFormatter pattern="MM/dd/yyyy" />
28      </field>
29      <field name="col1_end_date" len="10">
30        <dateFormatter pattern="MM/dd/yyyy" />
31      </field>
32      <whitespace len="10" comment="PERSON ID" />
33      <field name="lastname" len="30" />
34      <field name="confirmation" len="40" />
35      <field name="ssn" len="9" comment="#####">
36        <ssnFormatter />

```

Line: 3 Column: 56 XML Tab Size: 4

12. Edit the XML elements and attributes in the format definitions XML file to include the specific database fields that you want to download into your college's SIS. Use the following items to assist you in editing and validating this XML file:

- the XML schema file for the format definitions file
- the Data Fields for each of the student applications (CCCApply Standard and International, and BOG Fee Waiver)
- the Data Dictionaries for each of the student applications

13. When you are done creating and validating the format definitions XML file, save the file by using Save As, and rename the file to the name of your choice. It's best practice to include the application name in the file name. (e.g. StandardFormat.xml for the CCCApply Standard application.)

 **Note:** Your format file must always be stored in the formats directory of the Download Client files in order for it to be processed.

14. Open a command prompt (Start Menu -> type command for Windows) or open your Terminal window (Mac/*nix).

15. At the command, navigate to the directory where your job and format definitions XML files are located and then type the following command:

- For Windows:
download.bat jobs\StandardJob.xml
- For Mac/*nix:

./download.sh jobs/StandardJob.xml

16. Press your enter key and the download file will run.
17. You can navigate to the downloaded file and open it in a text editor to see the downloaded data (remember that you set the directory for the download file to be saved to in the job XML file's file element directory attribute, in step 9, above). The data for all student applications that have not previously been downloaded appears in a single row, per student as in the image below.

```

mycollege-150313-160632.txt
1 999-2015-Bain-Tyler-...-S-o-e-e-y --I-----o-o-0-1-0-10-0-0-10-false--Y-X-500182-AAAA007

```

18. Follow the data import steps for your college's SIS to import the download file data. It is highly recommended you perform this for a test SIS database to ensure the downloaded data imports into your SIS correctly.

Tip: You can set up a cron job to automate your application data downloads to occur on a regular basis.

Job File Configuration Details

The job file contains information about what student applications to download and what directories to use for the output file. A job file is created for each download job. When a job is set up in the college's scheduler, the job file name is passed as a parameter to the job.

The Job File

The job file controls the high-level aspects of the download, such as the server from which to retrieve the data. It also allows you to specify multiple downloads that may retrieve different datasets or present the data in different formats.

The Format Definitions File

The format definitions file allows you to select the specific fields you want to retrieve from the student applications and control the format of the data that the Download client delivers to you.

Sample Job file

Sample 1 – Standard download job for all three Contra Costa Colleges

```
<job url="https://admin.openccc.net:8443/ccctransfer" misCode="311,312,313"
  xmlns="http://xmlns.cccnext.org/xfer">
  <file directory="c:/temp" formatId="ccMainV1" prefix="contracosta"
  suffix=".txt" />
  <file directory="c:/temp" formatId="ccInstV1" prefix="contracosta"
  suffix=".txt" />
</job>
```

Filter Elements

Any given job has the basic constraint that only applications for the specified MIS codes can be retrieved. An optional filter is allowed to further restrict which student application data gets downloaded for a given job. With no filter specified, only data for "new" student applications for that MIS code are retrieved. An application is considered new if it has not previously been downloaded by the Download client.

<job> element

The job is the root element for all download definitions.

Attributes

Attribute Name	Description	Function
url	Specify the server URL for the system from which you want to download (see list below).	This allows you to create different jobs to download from different environments. Choose the URL for the environment you want to download, from the table below.
misCode	Specify the MIS code(s) for the college.	The college can only download applications for which they are authorized.

Environments for the URL Attribute

App Type/Environment	URL
Standard Application Pilot	https://pilot.admin.openccc.net:8443/ccctransfer
Standard Production	https://admin.openccc.net:8443/ccctransfer
BOG Pilot	https://pilot.admin.openccc.net:8443/ccctransferbog
BOG Production	https://admin.openccc.net:8443/ccctransferbog
International Pilog	https://pilot.admin.openccc.net:8443/ccctransferintl
International Production	https://admin.openccc.net:8443/ccctransferintl

<file> element

The file element specifies the directory to create the download file, how the file name is formatted and which format definition to use.

**Note:**

For Datatel colleges who have two definitions (one for main and one for Institutions attended), specifying the same prefix and suffix will put the output into a single file. If you want the output in two files, use a different prefix name parameter. The example above outputs to one file.

```
<file directory="/somedir/downloads" prefix="main" suffix=".txt" formatId="fixedMain1" />
```

Attribute Name	Description	Conditions
directory	The directory the download file will be created in.	The directory must exist.
prefix	The prefix of the download file.	
suffix	The suffix of the download file.	i.e. .txt or .csv
formatId	The format id to use.	The format id must exist in a format-definitions.xml file, specified by the <i>id</i> attribute. Note: A format definition file can contain more than one id attribute as in the sample below. However, format id's are intended to be unique. If you have the same id in more than one format definition file, the job will use the first one found in the formats folder. Also, more than one job file can point to the same format file (e.g. – you can set up job files for beta and production that point to the same format file.)

os	Defines the type of carriage return or line feed character.	os="windows" (Uses CR/LF) os="unix" (Uses LF) If os is omitted, it uses "windows" as the default.
----	---	--

Full File Name

Besides the prefix and suffix, the date and time are also included in the file name. Based on this example: <file directory="/somedir/downloads" prefix="main" suffix=".txt" formatId="fixedMain1" />If the transfer job ran on feb 6 2014, the file name would be /somedir/downloads/main-140206-081228.txt where "140206" represents the date and "081228" represents the run time of the job.

Format Definitions File Configuration Details

The format definitions file is an XML file used to define student application data download format:

- Which fields to include
- How each field is formatted
- Type of file (fixed or delimited)
- id (must match the associated job file's formatID).

The example sample format definitions file below can be used in conjunction with clicking the links in the navigation panel to the left to find the data fields for:

- Standard application data fields
- BOG Fee Waiver data fields
- International application data fields
- Supplemental Questions answers

Note:

You must always include the `ccc_id` field in your format definitions XML file for download jobs and include it as the data your store in your SIS. The California Community College Chancellor's office requires that each unique student ID be included in your MIS reporting data.

Sample format definition file

```
<?xml version="1.0" encoding="UTF-8"?>
<formatDefinitions xmlns="http://xmlns.ccnnext.org/xfer">
  <formatDefinition outputFormat="fixed" id="ccInstV1"
  stripDiacritics="true">
    <fieldList>
      <field name="ccc_id" len="8"/>
      <field name="hs_name" len="57"/>
      <whitespace len="4" comment="SCHOOL TYPE"/>
      <whitespace len="10" comment="HS START DATE"/>
      <whitespace len="10" comment="HS END DATE"/>
      <whitespace len="10" comment="PERSON ID"/>
      <field name="lastname" len="30"/>
      <field name="confirmation" len="40"/>
      <field name="ssn" len="9" comment="#####"/>
      <field name="hs_cds" len="15"/>
      <field name="hs_edu_level" len="1"/>
      <field name="hs_comp_date" len="10">
        <dateFormatter pattern="MM/dd/yyyy"/>
      </field>
      <whitespace len="2" comment="RECORD BREAK"/>
      <field name="coll_name" len="57"/>
      <whitespace len="4" comment="SCHOOL TYPE"/>
      <field name="coll_start_date" len="10">
        <dateFormatter pattern="MM/dd/yyyy"/>
      </field>
      <field name="coll_end_date" len="10">
        <dateFormatter pattern="MM/dd/yyyy"/>
      </field>
      <whitespace len="10" comment="PERSON ID"/>
      <field name="lastname" len="30"/>
      <field name="confirmation" len="40"/>
      <field name="ssn" len="9" comment="#####"/>
      <field name="coll_cds" len="15"/>
      <field name="coll_degree_obtained" len="1"/>
      <field name="coll_degree_date" len="10">
        <dateFormatter pattern="MM/dd/yyyy"/>
      </field>
    </fieldList>
  </formatDefinition>
</formatDefinitions>
```

```

</field>
<whitespace len="2" comment="RECORD BREAK"/>
<field name="col2_name" len="57"/>
<whitespace len="4" comment="SCHOOL TYPE"/>
<field name="col2_start_date" len="10">
  <dateFormatter pattern="MM/dd/yyyy"/>
</field>
<field name="col2_end_date" len="10">
  <dateFormatter pattern="MM/dd/yyyy"/>
</field>
<whitespace len="10" comment="PERSON ID"/>
<field name="lastname" len="30"/>
<field name="confirmation" len="40"/>
<field name="ssn" len="11">
  <ssnFormatter removeDashes="false"/>
</field>
<field name="col2_cds" len="15"/>
<field name="col2_degree_obtained" len="1"/>
<field name="col2_degree_date" len="10">
  <dateFormatter pattern="MM/dd/yyyy"/>
</field>
<whitespace len="2" comment="RECORD BREAK"/>
</fieldList>
</formatDefinition>
</formatDefinitions>

```

formatDefinition Element

Fields in the download file appear in the order they are defined in the format definitions XML file.

Attributes

Attribute Name	Value
outputFormat	Set the value to fixed or delimited.
Delimiter	<p>For delimited files, specify the delimiter. The default is comma (",") if unspecified. Examples of delimited file:</p> <p>outputFormat="delimited" delimiter=" " (pipe is the delimiter).</p> <p> Note: You can use multiple characters as a delimiter, if desired.</p> <p>outputFormat="delimited" delimiter="&#009;" (tab is the delimiter; the &#009; delimiter value results in tab delimited output)</p>
applicationType	Specifies which type of applications you are downloading (Standard, BOG Fee Waiver, or International). If not specified, it will default to Standard applications. For BOG, applicationType="bogfw". For International, applicationType="intl".
stripDiacritics	The stripDiacritics attribute will convert certain diacritic (non-English or foreign) characters to standard ascii characters. If omitted, the data will be sent as originally entered in the application. To convert diacritic characters, add stripDiacritics="true". Important note: If you use this attribute, be sure to test thoroughly before

Attribute Name	Value
	using it in production so you know you are getting the results you expect.

Child Elements

<fieldList>

The fieldList contains a list of field definitions.

<field>

The field element defines how an individual field is formatted. The element value is the name of the field in the submitted_application table (see the Download Data section, below).

```
<field len="10" name="app_id" /> Attributes
```

Attribute Name	Description	Restrictions
len	The fixed width of the field.	Only applicable in the fixed format.
name	The name of the field (from the application's Data Dictionary) to output	

<whitespace>

The whitespace element is only used in fixed format definitions when you want to insert fixed width spaces in between two fields.

```
<whitespace len="3" />
```

Attribute Name	Description
len	The fixed width of the whitespace.

<constant>

The constant element is used to insert a constant string value into the file. If you specify the len attribute, it will right pad the text with spaces if the len is greater than the length of the text. If you do not specify len, it will not add any padding.

```
<constant len="30">College one starts here</constant>
```

Attribute Name	Description
len	If specified, it will right pad the text with spaces if the len is greater than the length of the text. If omitted, it will not add any padding.

<newline>

The newline causes a carriage return (line feed). The newline element is aware of the operating system. For Windows it will add CR & LF. For Unix it will just add LF. <newline />

<byAppId>

The byAppId element allows you to specify a single application for download when you provide a specific app_id value.

```
<byAppId app_id = '16197' />
```

<dateFormatter>

A date formatter allows customization of how date/time values can be formatted using a pattern string. Example pattern strings are: MM/dd/yyyy, yyyy-MM-dd, etc.

Attribute Name	Description
pattern	A pattern string that is compatible with the Java programming language SimpleDateFormat.

<booleanFormatter>

The booleanFormatter allows you to configure what text displays/downloads for boolean-date type fields with true, false, and null values.

```
<booleanFormatter trueValue="1" falseValue="0" nullValue="?" />
```

Attribute Name	Description
trueValue	Specifies the text to output in the field if the underlying value is true
falseValue	Specifies the text to output in the field if the underlying value is false
nullValue	<p>The optional nullValue allows you to specify the output if the underlying value is null (i.e. replace the in nullValue="?" to be the value you want to display for underlying values that are null)</p> <p> Note: If the nullValue attribute is not defined, then any fields with null values will default to display the falseValue attribute in your download data. If neither the nullValue nor the falseValue attributes are defined, then a null value downloads as a string of "false."</p>

<ssnFormatter>

The ssnFormatter applies formatting to social security numbers to include or remove dashes.

```
<field name="ssn" len="9">
  <ssnFormatter />
</field>

<field name="ssn" len="11">
  <ssnFormatter removeDashes="false" />
</field>
```

Attribute Name	Description
name	Name of the input field.
len	Specifies the length of the output field

Attribute Name	Description
removeDashes	If removeDashes="false", len should be 11. This will format an SSN field with dashes.

<simpleMapper>

The simpleMapper formatter provides a way to make simple translations of data.

 **Note:** The simpleMapper only works for string data types (i.e. it does NOT work with smallint, boolean, etc.).

```
<field len="2" name="res_status">
<simpleMapper>
  <unmatched>D4</unmatched>
  <map>
    <from>1</from>
    <to>A1</to>
  </map>
  <map>
    <from>2</from>
    <to>B2</to>
  </map>
  <map>
    <from>3</from>
    <to>C3</to>
  </map>
</simpleMapper>
</field>
```

The following example translates the res_status field as follows:

Database Field Value	Download File Value
1	A1
2	B2
3	C3
Other value	D4

Here are the attribute definitions:

Attribute Name	Description
len	Specifies the length of the output (<to>) field (fixed format only).
name	Name of the input field.
unmatched	Value to use if actual data does not match any of the from values If unmatched element is not specified, the actual data value will be used

<stringFormatter>

The stringFormatter allows you to configure text field values to display/download as all upper-case or lower-case letters and what text displays/downloads for text fields with null values.

```
<stringFormatter caseConversion="lowercase" nullValue="[null]"/>
```

Attribute Name	Description
caseConversion	The optional caseConversion attribute specifies the text string to output as all lower-case or all upper-case letters: caseConversion="lowercase" caseConversion="uppercase"
nullValue	The optional nullValue attribute allows you to specify the output if the text string value is null: nullValue="null" (to download the value null if the underlying field value is null) nullValue="X" (to download the value X if the underlying field value is null)  Note: If the nullValue attribute is not defined, then any text-type fields with null values will default to display/download an empty string: " ".

<phoneFormatter>

The phoneFormatter is used to format phone numbers.

```
<field len="15" name="mainphone">
<phoneFormatter pattern="(999) 999-9999"/>
</field>
```

Attribute Name	Description
len	Specifies the length of the output field
pattern	See following table for sample patterns
name	Name of the input field

Here are some sample patterns:

Database Field Value	Pattern	Download Field Result
530-332-2233	9999999999	5303322233
530-332-2233	9999999	3322233
530-332-2233	(999) 999-9999	(530) 332-2233
5303322233	(999) 999-9999	(530) 332-2233

<numberFormatter>

The numberFormatter can be used for applying a variety of formats to numbers.

Example for applying a format for currency:

```
<field name="dep_other_income" len="20">
<numberFormatter format="%,d.00"/>
</field>
```

Attribute Name	Description
name	Name of the input field
len	Specifies the length of the output field
format	See the following table for sample formats

Database Field Value	Format	Download Field Result
25000	"\$%,d.00"	\$25,000.00
25000	"%,d.00"	25,000.00

Note: To view more format value examples, see: <http://docs.oracle.com/javase/7/docs/api/java/util/Formatter.html#syntax>

Data Fields: CCCApply Standard Application

The table below includes all the columns/fields you can download to your college SIS for the CCCApply Standard application. Refer to the CCCApply Data Dictionary for detailed field definitions.

Data Element (column)	Data Type	Length	Allows Null	Download	In Report Center?	Rules Available	Notes
academic_counseling	boolean						
ack_fin_aid	boolean						
address_same	boolean						
address_validation	character	1					
adm_ineligible	smallint						
alien_reg_expire_date	date						
alien_reg_issue_date	date						
alien_reg_no_expire	boolean						
alien_reg_number	character varying	20					
app_id	bigint		NOT NULL

term_description character varying(100)	enrol_term_year_description
major_code character varying(30)	Major Code
major_description character varying(100)	Major Name
tstmp_submit timestamp with time zone	Application Date Submitted
ssn_display character varying(11)	N/A - new
foster_youth_status character(1)	fosterYouthStatus
foster_youth_preference Boolean	N/A - new
foster_youth_mis Boolean	fosterYouthMIS
foster_youth_priority Boolean	fosterYouthPriority

Data Fields: CCCApply International Application

The table below includes all the columns/fields you can download to your college SIS for the CCCApply International application. Refer to the CCCApply International Data Dictionary for detailed field definitions.

Data Element (column)	Data Type	Length	Allows Null	Down-loadable	In Report Center?	Rules Avail-able?	Notes
address_verified	boolean			Yes	Yes	Yes	
agent_phone_ext	varchar	4		Yes	Yes	Yes	Not currently used
agent_phone_number	varchar	25		Yes	Yes	Yes	
alt_non_us_phone_auth_txt	boolean			Yes		Yes	Not currently used
alt_non_us_phone_ext	varchar	4		Yes		Yes	Not currently used
alt_non_us_phone_number	varchar	25		Yes	Yes	Yes	
app_id	bigint		No	Yes	Yes		
app_lang	char	2		Yes	Yes	Yes	
authorize_agent_info_release	boolean			Yes	Yes	Yes	
birthdate	date			Yes	Yes	Yes	From Account
campaign1	varchar	255		Yes	Yes		Added 3/27/15
campaign2	varchar	255		Yes	Yes		Added 3/27/15
campaign3	varchar	255		Yes	Yes		Added 3/27/15
ccc_id	varchar	8	No	Yes	Yes	Yes	
citizenship_status	varchar	1		Yes	Yes	Yes	
city	varchar	50		Yes	Yes	Yes	Agent's City
coenroll_confirm	char	1		Yes	Yes	Yes	Not currently used
coll_cds	varchar	30		Yes	Yes	Yes	
coll_ceeb	varchar	30		Yes	Yes	Yes	
coll_city	varchar	50		Yes	Yes	Yes	
coll_college_attended_id	bigint			No	Yes	Yes	

Data Element (column)	Data Type	Length	Allows Null	Downloadable	In Report Center?	Rules Available?	Notes
col1_country	char	2		Yes	Yes	Yes	
col1_degree_date	date			Yes	Yes	Yes

Data Fields: BOG Fee Waiver Application

The table below includes all the columns/fields you can download to your college SIS for the BOG Fee Waiver application. Refer to the BOG Fee Waiver Data Dictionary for detailed field definitions.

Data Element (column)	Data Type	Length	Allows Null	Download	In Report Center?	Rules Available	Notes
ack_fin_aid	boolean						
app_id	bigint		No				
app_lang	string	2					
birthdate	date						
born_before_23_year	string	1					
campaign1	string	255					
campaign2	string	255					
campaign3	string	255					
ccc_id	string	8	No				
cert_national_guard	string	1					
cert_veteran_affairs	string	1					
city	string	50					
college_id	string	3					
college_name	string	50					
confirmation_applicant	boolean						
confirmation_number	String	25					
confirmation_parent_guardian	boolean						
country	string	2					
dep_gross_income	integer						
dep_number_household	integer						
dep_other_income	integer						
dep_total_income	integer						
dependency_status	string	1					
dependent_on_parent_taxes	string	1					
dependents	string	1					
determined_ab540_eligible	string	1					
determined_non_res_exempt	string	1					
determined_residentca	string	1					
elig_bogfw	String	1					

Data Element (column)	Data Type	Length	Allows Null	Download	In Report Center?	Rules Available	Notes
elig_medal_honor	string	1					
elig_method_a	boolean						
elig_method_b	boolean						
elig_police_fire	string	1					
elig_sept_11	string	1					
email	String	50					
emancipated_minor	string	1					
firstname	string	50					
general_assistance	string	1					
homeless_youth_hud	string	1					
homeless_youth_other	string	1					
homeless_youth_school	string	1					
ind_gross_income	Integer						
ind_number_household	integer						
ind_other_income	integer						
ind_total_income	integer						
ip_address	string	15					
last_page	string	25					
lastname	string	50					
legal_guardianship	string	1					
living_with_parents	string	1					
mainphone	string	14					
mainphone_auth_text	boolean						
mainphone_ext	string	4					
marital_status	string	1					
married_or_rdp	string	1					
middlename	string	50					
non_us_address	Boolean						
parent_guardian_name	string	60					
parents_assistance	string	1					
parents_deceased	string	1					
postalcode	string	20					
preferred_firstname	string	50					

Data Element (column)	Data Type	Length	Allows Null	Download	In Report Center?	Rules Available	Notes
preferred_lastname	string	50					
preferred_middlename	string	50					
preferred_name	boolean						
province	string	30					
reg_dom_partner	string	1					
ssi_ssp	string	1					
ssn	string						
ssn_exception	boolean						
ssn_hash	string						
ssn_last4	string	4					
ssn_type	string	1					
state	string	2					
status	String	1					
streetaddress1	string	50					
streetaddress2	string	50					
student_college_id	string	20					
tanf_calworks	string	1					
term_code	string	5					
tstmp_create	date	timestamp with time zone					
tstmp_download	date	timestamp with time zone					
tstmp_submit	date	timestamp with time zone					
tstmp_update	date	timestamp with time zone					
us_veteran	string	1					
year_code	bigint						
year_description	string	100					

Data Fields: Supplemental Questions Responses

Important: These fields names are the names populated in the database table and therefore the names you reference in your format definitions XML file. See the sections above for what names to use in the XML file. When you configure your format XML file for supplemental question download by including the database field name below, the "nn" in the Database Field Name column example below is replaced with the number for each field of that type that you included in your supplemental questions (i.e. <field name = "supp_secret_01"/>, <field name = "supp_secret_02"/>, etc.).

Database Field Name	Data Type	Comment
supp_check_nn	boolean	50 check box answers; nn=01 thru 50
supp_country_nn	character(2)	5 country code answers; nn=01 thru 05
supp_date_nn	date	5 date answers; nn=01 through 05
supp_secret_nn	character varying(20)	5 hidden text field responses; nn= 01 through 05
supp_menu_nn	boolean	30 menu answers nn=01 through 30
supp_phonenumber_nn	character varying(25)	5 phone number answers nn=01 through 05
supp_state_nn	character(2)	5 state code answers nn=01 through 05
supp_text_nn	character varying(250)	20 text answers nn=01 through 20
supp_yesno_nn	boolean	30 yes/no answers nn=01 through 30
