

## Setting up Connexion at OCLC

In order for records to be exported from Connexion into the Network Zone (NZ), there must be an Integration Profile set up in the Network Zone instance, which has been completed.

\*Each institution then must add a [Gateway Export in Connexion](#) using the NZ credentials to enable export and overlay of records in the Network Zone.

### **OCLC Connexion Configuration (action required by each Connexion user at each institution)**

Create an OCLC Gateway Export in Connexion (Tools > Options > Export > Create ... > OCLC Gateway Export) (General > Admin > Export Options)

- Host Name: [na05.alma.exlibrisgroup.com](http://na05.alma.exlibrisgroup.com)
- Port: 5500
- Logon ID: 01CACCL\_NETWORK
- PW: contact NZ Manager for password ( [jhartwigsen@ccctechcenter.org](mailto:jhartwigsen@ccctechcenter.org) )
- Click Ok
- Name your Gateway Export something like "Alma NZ" to differentiate it

Each institution does NOT need to configure an Alma Integration Profile for Connexion in order to use Connexion to export and overlay records into the Network Zone. Each institution ONLY needs to set credentials in Connexion as explained above.
